

**CleanSpeak** is a configurable filtering and moderation platform. CleanSpeak will easily filter and moderate all of your user generated content - including chat, comments, posts, images, audio and video.

### API

A simple RESTful API makes integration easy.

### User Profiling

Focus valuable time and effort on escalated problem users.

### Advanced Filtering

Filter profanity, obscenities, ascii art, emails, URLs, phone numbers, BBCode and much more.

### User Tracking & Scoring

Intuitive dashboard shows historical user information, tracking & scoring.

### Advanced Image Filtering & Moderation

Filter pornographic, violent, spoofed and dangerous images. Moderate thousands of images per hour.

### Reporting

Track moderator actions and conversations. Keep the team efficient and communicative.

### Customizable Lists

Easily build custom lists and modify the default blacklist.

### Community Analytics

Discover trending topics. Find similarities between keywords, common words and phrases.

### Pre Moderation Queues

Approve or reject user content prior to posting within the community.

### User Discipline

Set up automated warnings and actions. Prevent troublesome users from disturbing the community.
