

Around Cryptocurrency Allows Bitcoin Users to Send and Receive Bitcoin Without a Wallet

PRESS RELEASE NOV 13, 2017 14:00 SAST

Through the Around.WS Address to Address Transfer Tool, Bitcoin Users can Make Direct Transfers, Securing their Cryptocurrency

Cape Town, South Africa, November 13, 2017

(Newswire.com) - Around Corporation (Pty) Ltd, a South African company located in Cape Town, has launched their [Around Cryptocurrency Wallet Services](#), one of the tool allows Bitcoin users to send and receive the cryptocurrency without a wallet by direct [Bitcoin address to address transfer](#). This eliminates concerns about wallet hacking and users from losing their cryptocurrency within a wallet. With

the Around.WS Bitcoin Address to Address direct transfer tool users are able to gain real control of their Bitcoin.

“Many people think the only way to send and receive Bitcoin is with a wallet, but that’s not true,” says Theo Fitchat, CTO of Around Corporation (Pty) Ltd. “Getting users back to the basics is important to avoid hacking and a loss of funds. As long as the Bitcoin address is available, a simple transfer can be made through our transfer tool.”

The Around.WS Bitcoin Address to Address direct transfer tool is easy to use. Simply open up the tool at <https://around.ws/en/bitcoin/a2/> from a modern browser like Chrome, Firefox or Edge. Once secure communication channel been setup, all the user needs to do is provide the details of the Fund From and Fund To section, then follow instructions to make the direct transfers. Users can manage the amount sent, create multi-address to multi-address transaction, as well as see the time estimate for a transaction to be accepted into Bitcoin network.

Fitchat launched his company in 2017, but this is not his first tech endeavor. He grew up in South Africa and studied at North-West University. Fitchat has

had more than 15 years of experience in developing systems for finance and security. He has a strong understanding of cryptography and security as well as the mind of a criminal hacker. Fitchat is able to apply his knowledge to make systems secure and impenetrable, and teach others to do the same.

Some of his notable achievements include the creation of an affordable security keypad for home entry, controlled by personal computer called "Mex"; creation of a system called "Canary" that receives dangerous gas data from underground and alerts control room operators at mines; and the creation of a crossword generator called "Cluedapp" that markets products and services.
