

## ***Frequently Asked Questions***

### ***What is the illumiSAFE?***

The illumiSAFE is a fully functional Smart Safe hidden inside a Smart Lamp. It is fully controllable via a secure Smartphone App or an RFID key that ships with every illumiSAFE.

### ***What was the inspiration for the illumiSAFE?***

The illumiSAFE was created in response to the lack of attention given to “smart enable” safe storage. The team saw an opportunity to connect people to their valuables in a more convenient way without compromising safety. The team focused on creating a Hidden Safe solution that people would be proud to include in their home decor.

### ***What is the safe made out of?***

The illumiSAFE is constructed out of sturdy, safe-grade materials. The outer casing is made of carbon steel while the inner casing is made of aluminum. The inner compartment and gun-holding elements are constructed from high-quality polycarbonate.

### ***How does it work?***

The inner casing is propelled upward through a series of electric motors and steel guides located at the base of the illumiSAFE. The mechanics are controlled through both Bluetooth Low Energy or through home wifi when accessed and controlled remotely.

### ***How long does it take to open the safe?***

Whether activated by the RFID key or the mobile App, the lamp takes 3 seconds to open completely. We are also building a fire-arm specific model that will cut the open time to less than one second.

### ***Are the internal configurations permanent?***

The internal compartment of the illumiSAFE comes in a variety of configurations. Customers can purchase multiple configurations to allow storage for different items including an all-drawer configuration, an open compartment configuration, a combination drawer-firearm configuration and a double-firearm configuration.

***Does it integrate with home automation platforms?***

The illumiSAFE is currently going through the rigorous approval process required to be MFI Certified by Apple and is built to be seamlessly incorporated into Apple's HomeKit ecosystem. Users will be able to access the illumiSAFE through the Home App on the iPhone/iPad/Apple Watch and Apple TV. It can also be controlled using Siri. The illumiSAFE will soon integrate with Google Home, Amazon's Alexa and the Vivent SmartHome platforms.

***Will the lamps include any visible branding to indicate its a safe?***

The goal of the illumiSAFE is to appear as an elegant, yet unsuspecting, piece of fine lighting furniture and will therefore feature no distinguishing features or branding on the exterior.

***How many lamp body styles are available?***

The illumiSAFE comes ready to wear a variety of lamp bodies ranging from brass, glass and stone designs to walnut, white pine and even mother of pearl. We anticipate making over 100 styles available by Spring of 2018.

***What other products is the Odon team working on?***

The Odon team has developed prototypes of a smaller version of the illumiSAFE called the illumiSAFE mini. Other items in prototype phase include a secure hair stand built specifically for the salon industry, a firearm-specific model with a faster open-time design, and an integrate-able desk version for the demanding professional.

***How much will it sell for?***

We will be releasing more information over the next few months as we begin taking pre-orders and narrow in on the features sets and designs that will ship to customers. Stay tuned!

***Who comprises the Odon/illumiSAFE Team?***

The Odon team is comprised of CEO, Burt Skiba JD/MBA, who comes from the aerospace industry with experience in industrial engineering and design; President, Mark Evans JD/MBA who brings hardware manufacturing and software development experience, Principal Engineer, Clint Solomon who's experience has been in medical device design and production; VP of Strategy, Tom Merrill, who's industry analysis experience has centered mostly on health care, and Yuchong Li, electrical engineer.
