

# Zasso Digital Herbicide opens new research and development centre in Aachen

The Digital Herbicide

# Today the city of Aachen has given Zasso Digital Herbicide the permission to build its new research and development centre in Aachen - the leading German city for electronic development.

---

The strong connection to the University of Aachen (RWTH) and the international community in the German Netherlands Belgium triangle led the decision to locate this important research centre in Aachen

The facility is designed to run carbon dioxide neutral and can host nearly 100 engineers on 850 sqm. In addition, Zasso will built a 450 sqm lab to build and test the latest generation of the digital herbicide platform.

“I am happy to open this unique environment to our team to increase creativity and help to have a good and healthy working environment” says Dirk

Vandenhirtz CEO Zasso Digital Herbicide “this new facility will not on only enable us hosting our fast-growing team, but it will also include areas for creative work exchange and playground for employee’s kids.”

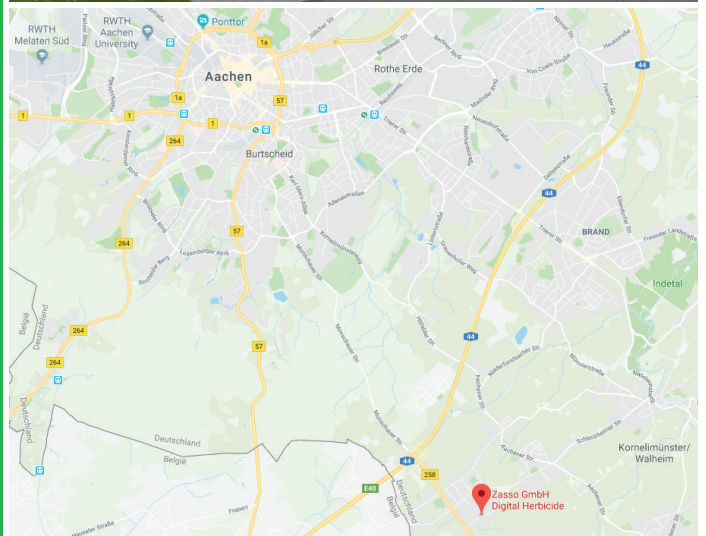

Using latest building technology, the facility shall be opened by in Q1 2019- Zasso will invest 2.9 Mio Euro to build this Ag Tech research hub.

If you are interested to join the team, please send your application at [jobs@zasso.de](mailto:jobs@zasso.de)

**About Zasso:** Zasso Group specializes in clean plant control technologies for agriculture, silviculture, home, traffic and urban areas. Zasso’s methods target both the shoots and the even more critical roots of undesired plants systemically by employing advanced lightweight high-voltage methods. Our ground-breaking systems deliver efficient and robust solutions and add an innovative approach to the dwindling number of available methods for environmentally sympathetic plant control. Electroherb reshapes weed control and plant management for both current and future challenges.
